

# NOVEL LAPAROSCOPIC REVERSABLE GASTRIC BYPASS WITH FUNDECTOMY AND ESPLORABLE STOMACH ( Lesti model)

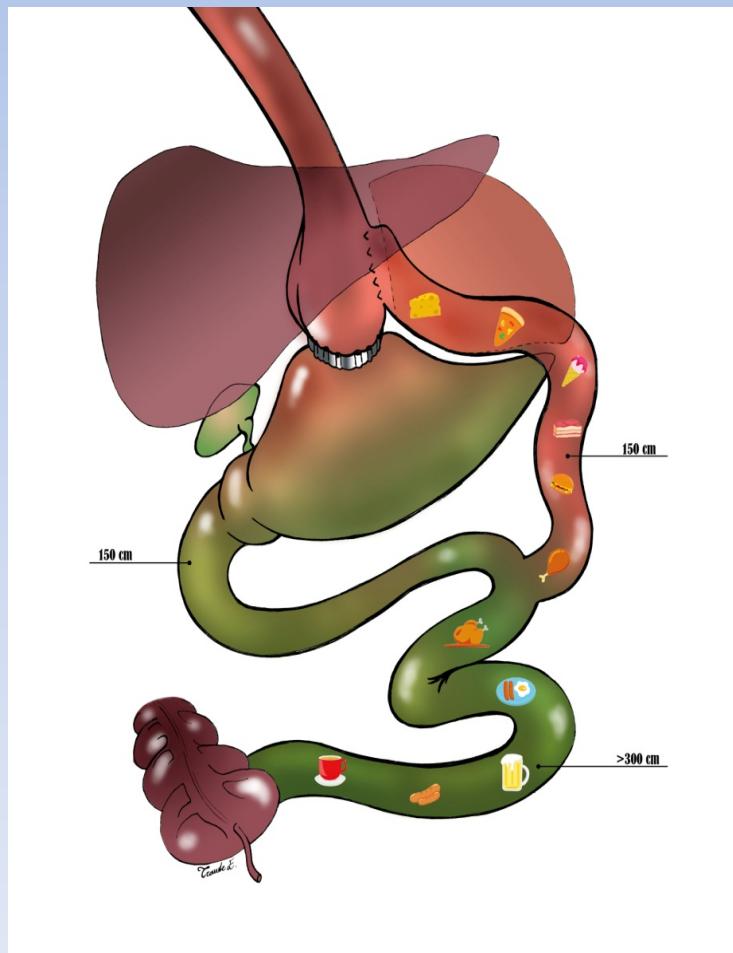

## TECNICAL ASPECTS AND RESULTS OF 853 PATIENS at 10 years

G. Lesti, F. Altorio , A. Aiolfi, F. Lesti.

FONDAZIONE SALUS /PRIVATE HOSPITAL DI LORENZO AVEZZANO  
EUROPEAN PATENT n. 3030202  
USA REGISTERED n BX3609R/REPH/rrr

Obesity Surgery :vol.28,Issue 9 September 2018

Il disegno mostra la tasca gastrica chiusa dal dispositivo DCB(dual component band) in connessione con la ansa alimentare lunga 120/150 cm(in rosso). La bile ed i succhi gastrici percorrono la ansa biliare lunga 120/150cm(in verde) La rimozione del fondo gastrico determina la riduzione della grelina ormone che stimola ed induce il senso di fame

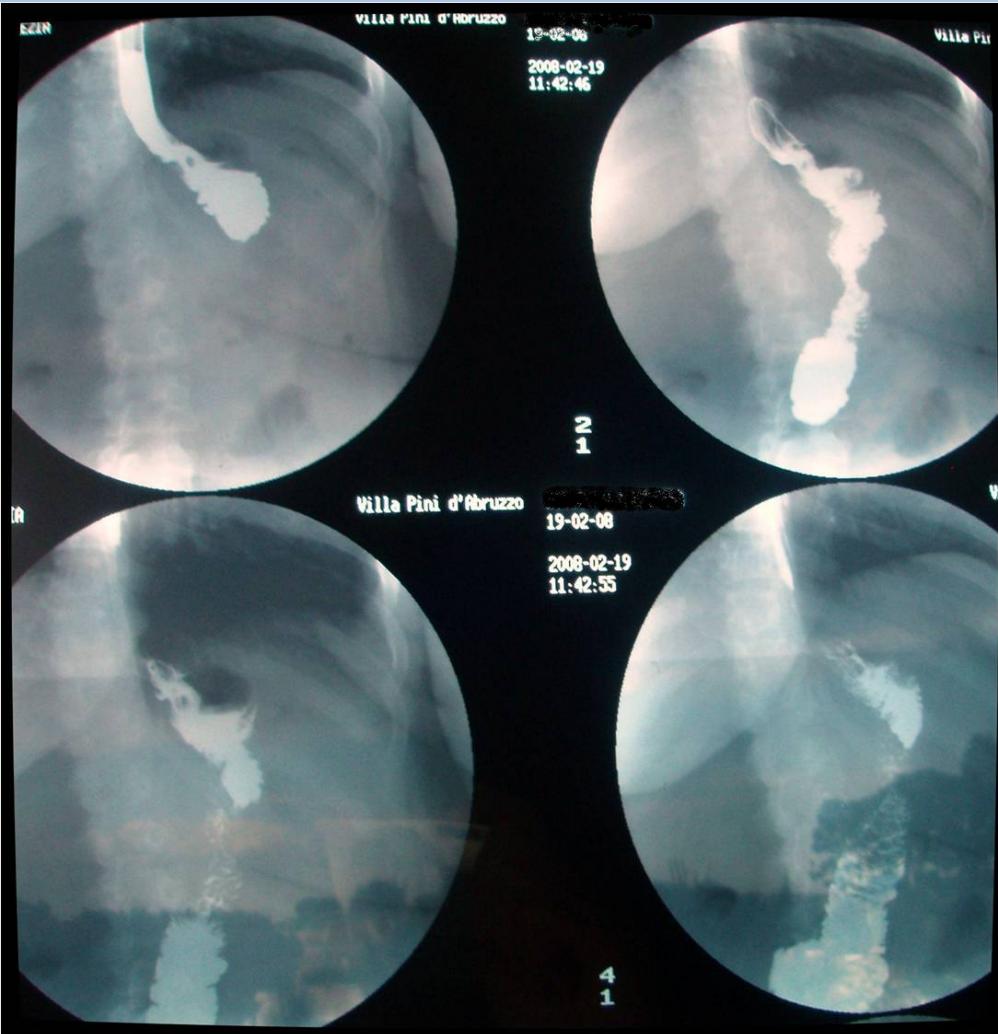

Grelina misurata : 28 pazienti

Grelina valore normale: 200-800 pm/l

Grelina pre-operatoria 660 pm/l.  
Grelina post-op//30 gg 76 pm/l

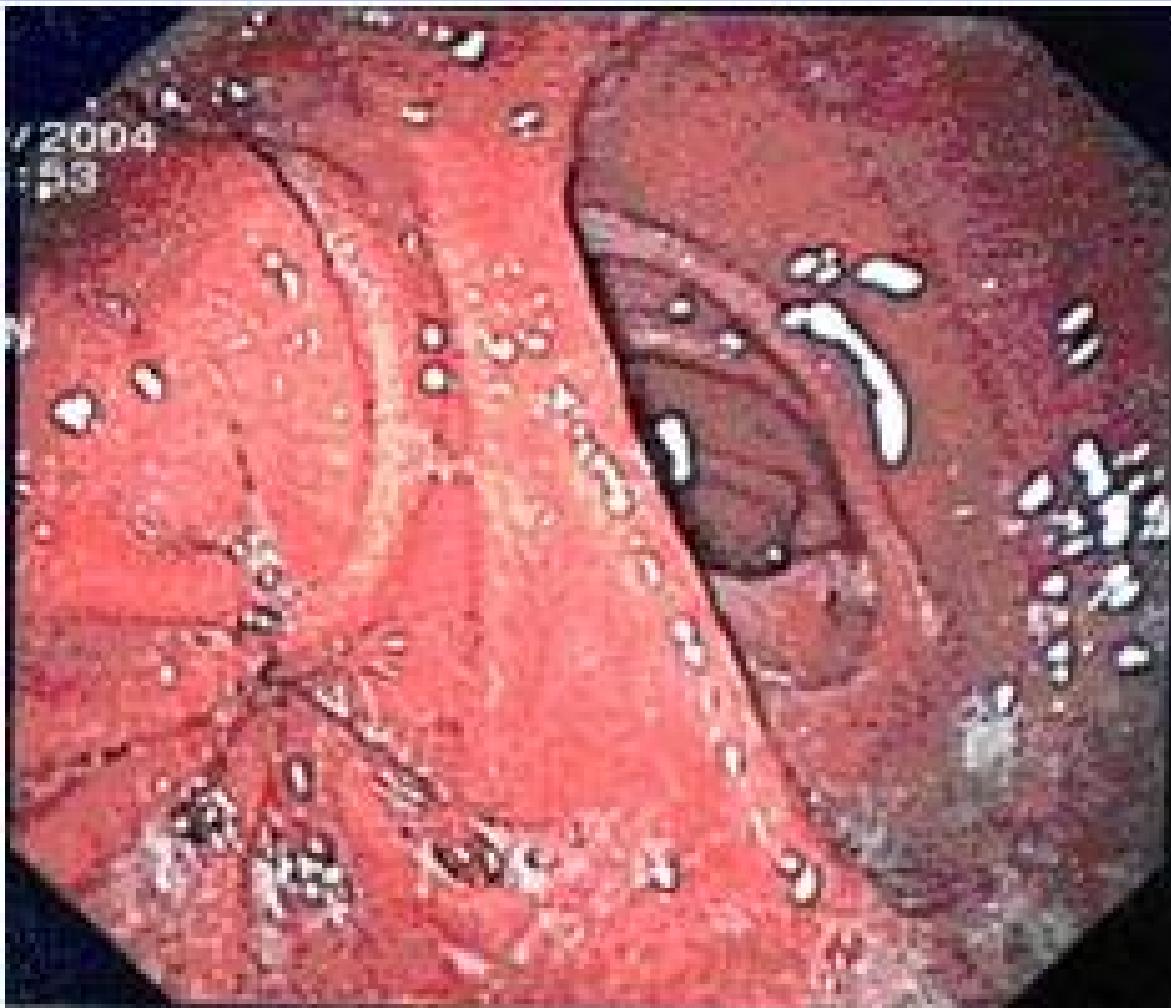

Grelina post-op//180 gg: 130pm/l

# NOVEL LAPAROSCOPIC REVERSABLE GASTRIC BYPASSN WITH FUNDECTOMY AND ESPLORABLE STOMACH.

Il transito esofago gastrico, con il gastrograffin mostra il passaggio nell'ansa alimentare.  
Nulla passa nello stomaco escluso

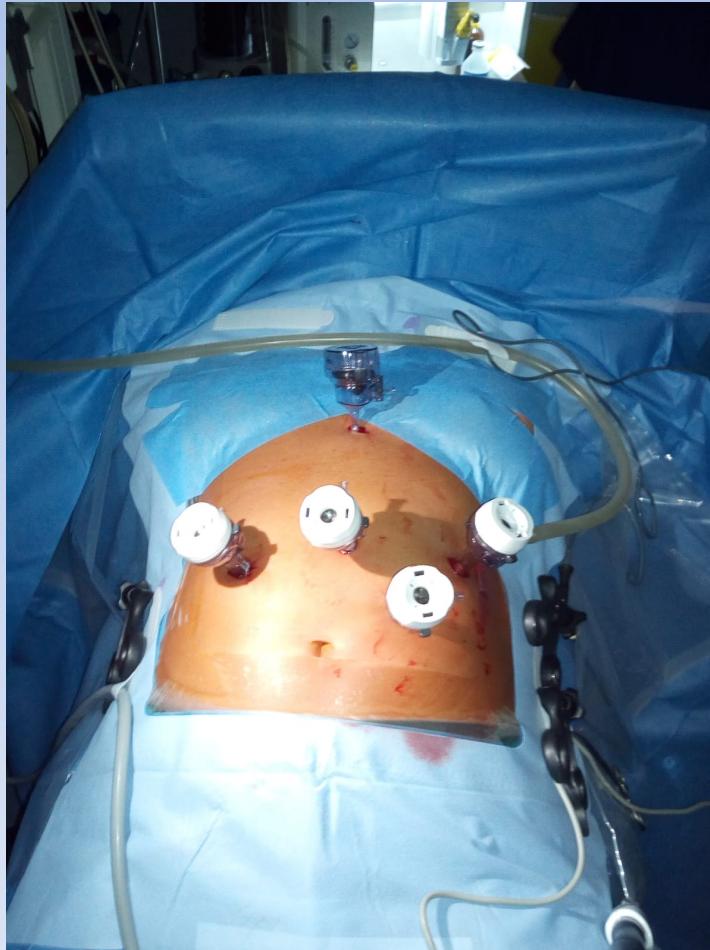

# NOVEL LAPAROSCOPIC REVERSABLE GASTRIC BYPASSN WITH FUNDECTOMY AND ESPLORABLE STOMACH.

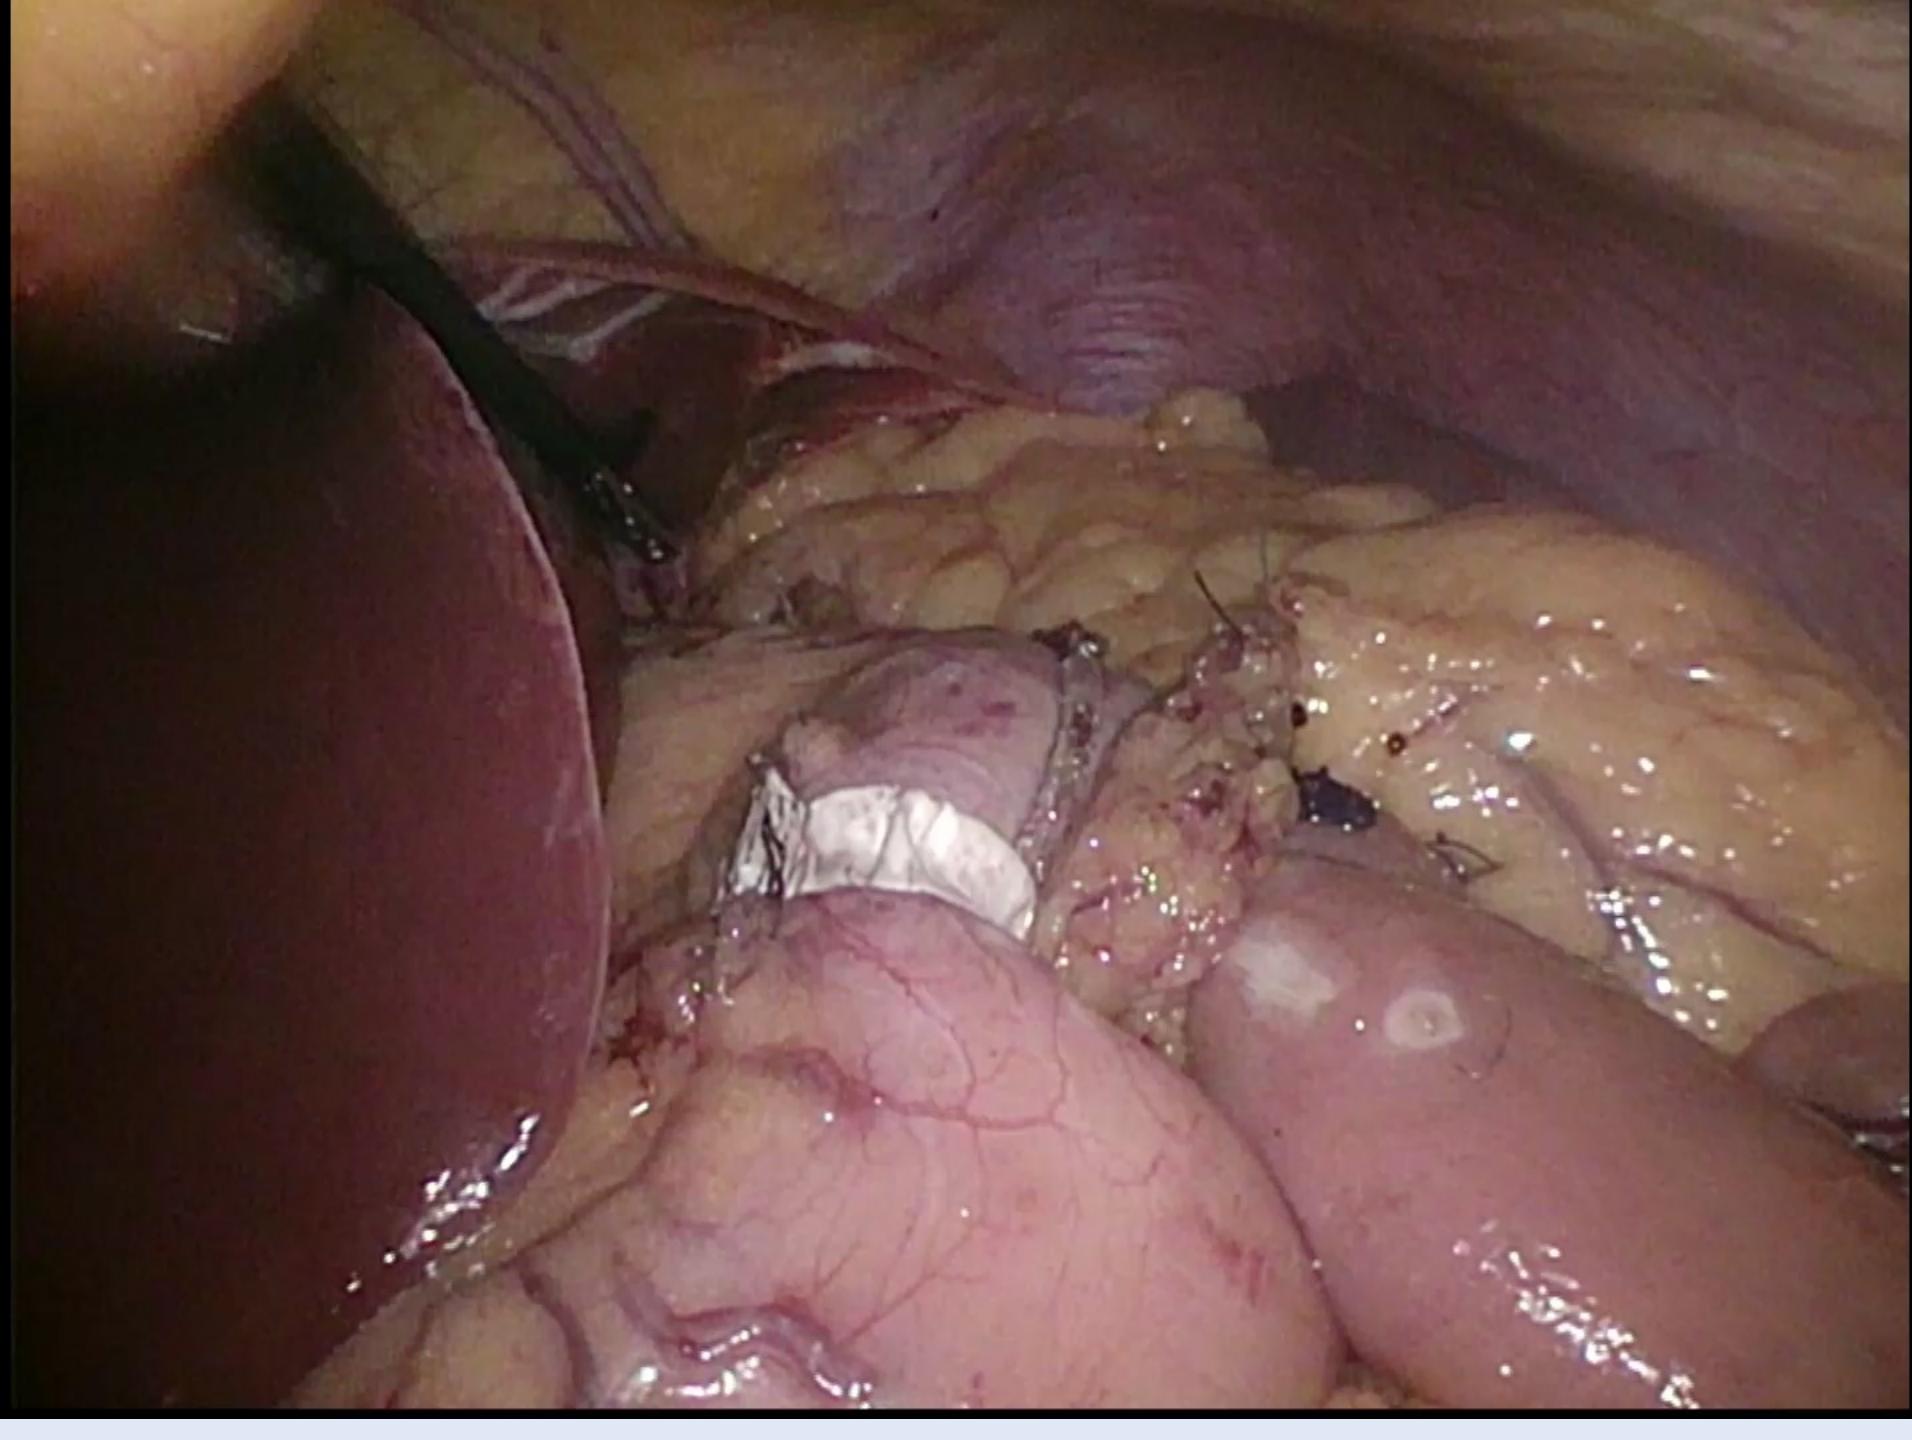

Tutti i pazienti sono stati sottoposti ad una gastroscopia dopo il primo anno . Raramente abbiamo riscontrato presenza di bile nella tasca gastrica

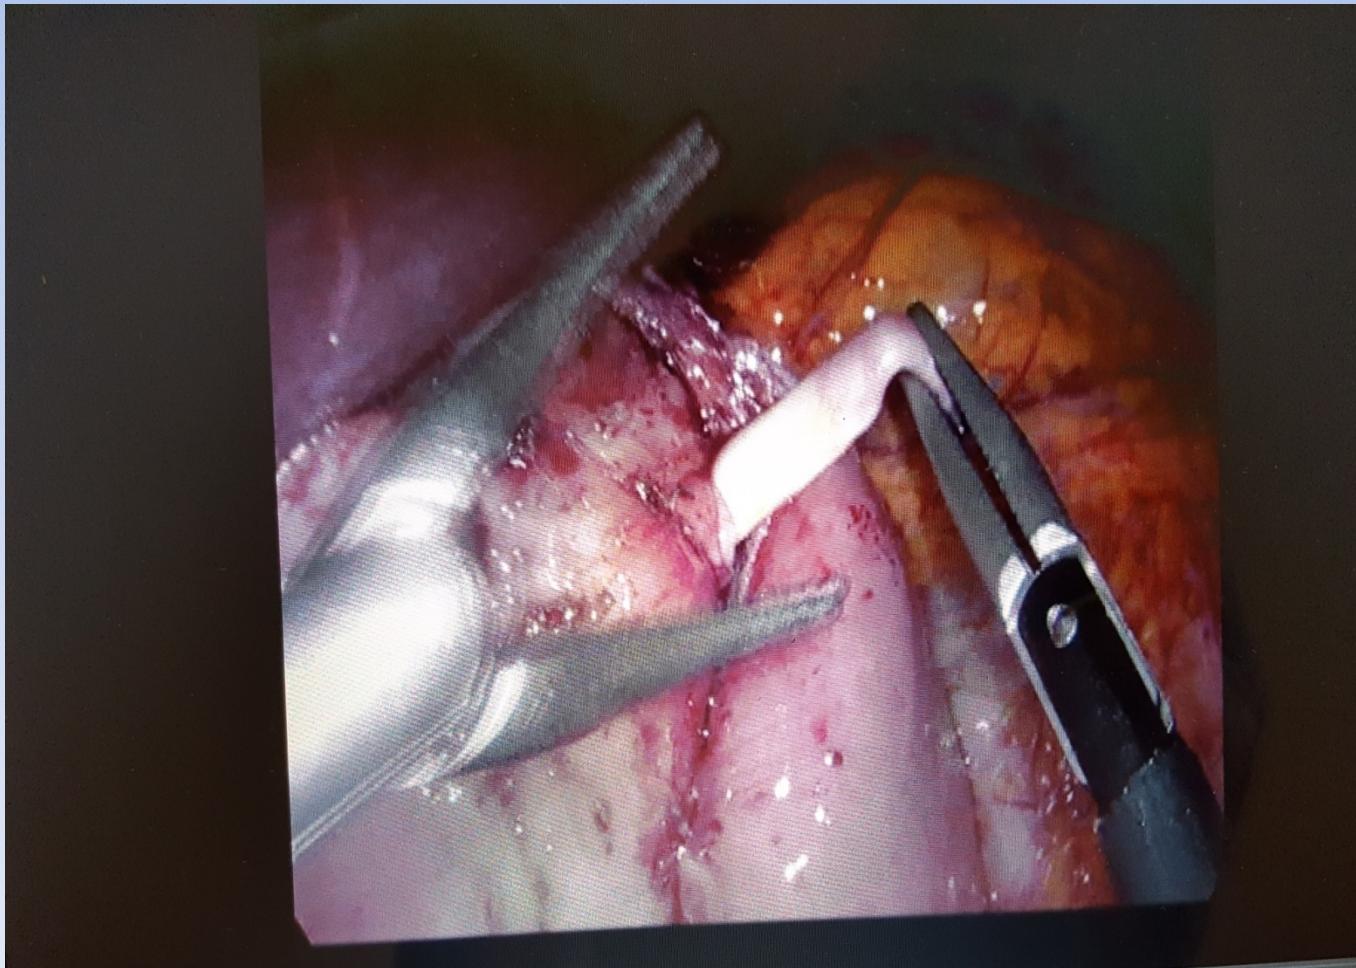

Abbiamo avuto solo 3 ulcere anastomotiche in pazienti forti fumatrici

# NOVEL LAPAROSCOPIC REVERSABLE GASTRIC BYPASS WITH FUNDECTOMY AND ESPLORABLE STOMACH.

The patient, a large smoker 40 cigarettes a day, at the fourth month of pregnancy, was suffering from an ulcer of the gastro-jejunal anastomosis totally occluding the passage of food. The patient had a birth 4 months later. The removal of the band was very easy

Comorbidities resolution at 10years (84paz.)

	Resolution	Improvement	No change
*Hypertension (49.5%)	67,4%	26,1 %	6,5%
*Dyslipidemia (47.3%)	72,3%	27,7%	-----
*GERD (37.6%)	81,8%	18,2%	-----
*Diabetes (24.6%)	62,5%	18,4%	19,1%
*OSAS (19.4%)	60,5%	39,5%	-----
*Depression (17.5%)		83,4%	16,6%

# NOVEL LAPAROSCOPIC REVERSABLE GASTRIC BYPASS WITH FUNDECTOMY AND ESPLORABLE STOMACH

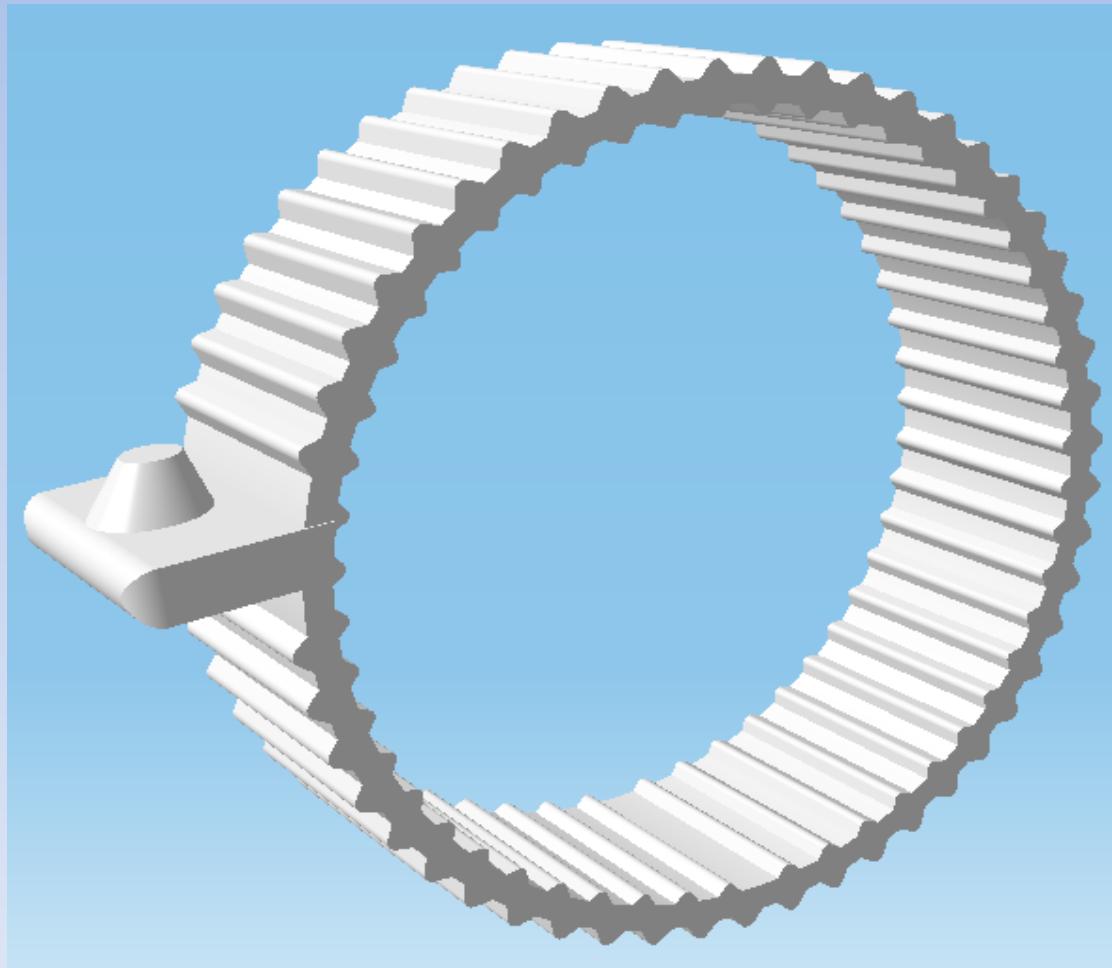

## MAJOR COMPLICATIONS

- The overall procedure-related morbidity rate was 1.1% (95% CI 0.4–2.3%)

Mortality	0
Leaks	0
Bleeding/reoperations	2
Ulcers (heavy smokers)	6
Internal hernias/reoperations	3
Stricture	0

DCB is made by a silicon strip inside a tube of ePTFE 4 cm longer. The two materials are fixed at the end. The ePTFE assumes an accordian shape.

The silicon strip has three measures: 5,6,7 cm long

## **\*\*CONSIDERATIONI**

- . Questo device ha una elasticità tale da chiudere delicatamente il passaggio dalla tasca gastrica allo stomaco rimanente sia ai cibi solidi che a quelli liquidi; e nello stesso tempo, non dove permettere il passaggio della bile dallo stomaco rimanente alla tasca gastrica. Per di più esso permette il passaggio dell'endoscopio sia da 5 che da 12 m
